Master Panel Firmware Update via Bootloader -

Note: The system setup will not be altered

Notify any relevant party prior to commencing update.

1. Turn off power to the master panel (remove battery if connected)

2. Remove the lid & connect the software cable to the internal bootloader port and computer
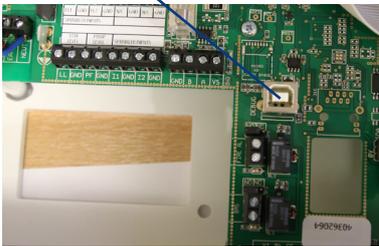

3. Hold down the centre button and then turn the power on.
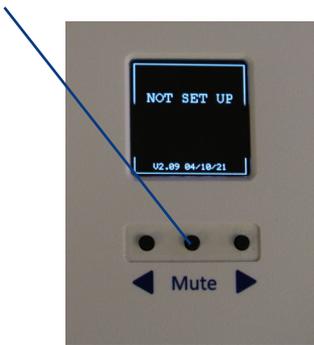

Note : the Power LED will flash orange to show it is in bootloader mode.
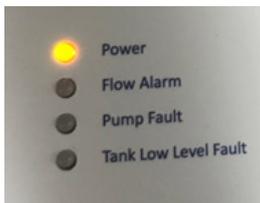

4. Open the FloWatch software configurator (This can be found on the Flowatch website under download section)

Click 'Get Started'

Welcome to the FloWatch System Manager and Installation Wizard.

Get Started
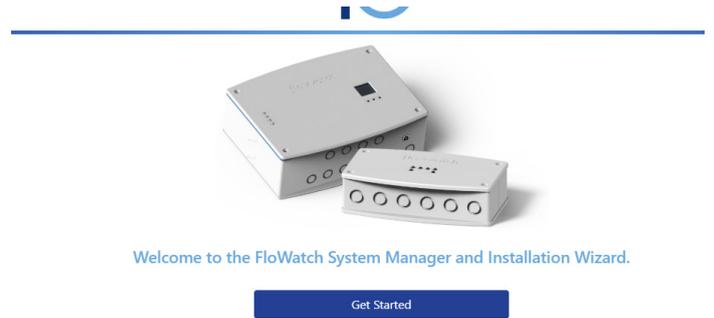

The below screen is shown

Upgrade the Units Firmware

Please select a hex file.   Select Firmware and Program

Lines programmed: 0/0
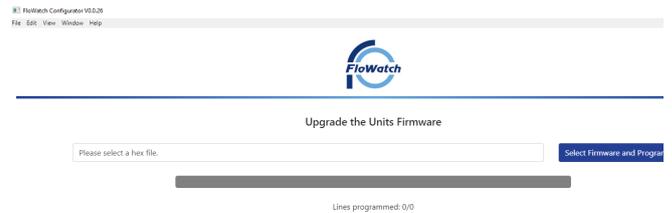

5. Download the latest firmware. This can be found on the FloWatch website under download section

Firmware - Master Panel

FloWatch have a continual improvement policy, taking on board regulatory updates, customer feedback and any product improvements.

Because of this, from time to time we will release firmware updates that can be installed by your service contractor.

FloWatch recommend updating the master panel to the latest firmware when carrying out maintenance/ annual service.

V 2.18 firmware
